ROLL DROP BOUNCE™

The Science of Motion

Physics roars to life when this traveling exhibit rolls into town!

Visitors roll, drop, and bounce to investigate kinetic experiences and create understanding. The exhibits inspire visitors to think up new experiments to try while they play. Genuine hands-on activities engage visitors in fun discovery and provide concrete understanding.

Roll, Drop, Bounce is an active learning laboratory that invites visitors to think and ask questions. Your visitors will love experimenting and playing, and will come back for more.

Hands-On Experimenting

These open-ended activities appeal to all ages and encourage creative tinkering:

- Moving on air currents
- Catapults
- Balancing acts
- Newton's cradle
- Balls racing on ramps
- Loop the loop
- Designing and building cars
- More!

Exhibit Rental Information

- 1,500 square feet, approximately
- Standard HVAC and electrical
- Eight-foot ceiling height
- Simple, two-person installation
- Three-month participation fee: \$8,500 + inbound shipping
