

# Your Weight In Gold!

(no penny required!)

Guess the value of your weight in gold. How much do you think you would be worth? Step on the scale to see how close you are. Here is a hint: The price of gold is currently about \$21,200 per pound.\*

Because gold is about 19.6 times as dense as a human, your weight in gold would fit in your hands-if you can lift it. So now imagine a life-size statue of yourself in gold. How much would that be worth? Hint: It's going to weigh nearly 20 times as much as you do.

\*As of September 26, 2013. The value changes daily!
